Summary

As a web developer, I have the diligence and tenacity to deliver the best possible results in an efficient manner. I aim to deliver websites that are as pleasing to the eye as they are functional to the user. I believe in approaching my projects by being as flexible as possible, since I know that projects rarely work out as planned and oftentimes require developers to adapt. Below are a few of my projects, the rest can be viewed on Github and I would love to connect.

SKILLS

Web Development HTML5 | JavaScript | jQuery | postgresSQL | MongoDB | Express | Angular | Node.js | CSS3 | Bootstrap | Materialize | Git | Trello | Slack | Wireframing | AJAX | Version Control | Design | Lifecycle | Github | Application Design | Mobile | Agile | Linux | Design Patterns | Best Practices | API

Languages English & Spanish

PROJECTS

Gifter | Random Gifts | <http://giphtur.herokuapp.com/>

An application created using the Wal-Mart api. This application chooses from Wal-Mart's inventory and picks random gifts for users. A great application for people who can't decide what gifts to buy for loved ones.

Skedgit | Entertainment Finder | skedj.herokuapp.com/

Skedgit is a way to find entertainment near you while also saving what you selected to later view in a schedule. If you don't know what kind of activities there are to do in your area this application comes in handy. This application was built using JQuery, Javascript, Material front-end library, express, mongo, and node js.

Rubium | Learning Platform | rubium1.herokuapp.com/

Rubium is a learning platform where users can gain access to a myriad of courses published by various authors, lessons can be searched by tag or by course name. This application was built using angular 1.

EXPERIENCE

Mattel 2012 to 2014

As an intern I was in a team environment and I was in charge of maintaining a group website where other workers would talk about future projects. My contribution to the site included editing posts, adding new logos, and cleaning the database of any old users that no longer worked at the company.

Dynamic Software Consulting 2016 to Present

Used technologies like Node.js and Javascript to build a new web application for talent acquisition.
